

## Our Vision

At Hansa Biopharma we envision a world where all patients with rare immunologic diseases can lead long and healthy lives.

## Our Mission

We leverage our unique enzyme technology platform to develop innovative lifesaving and life altering immunomodulating therapies, bring these to the patients with rare diseases who need them and generate value to society at large

## Our Focus

Our goal is to create value for rare patients, healthcare providers, societies and our shareholders. We are striving to develop therapies for patients with an unmet medical need and bringing our products all the way from the laboratory to the patients.

## Our Technology

Our lead product candidate imlifidase, is an antibody-cleaving enzyme that specifically targets IgG and inhibits IgG-mediated immune response. A Marketing Authorization Application for imlifidase is currently under review by the European Medicines Agency. If approved, imlifidase may potentially enable kidney transplantation in highly sensitized patients.

Hansa Biopharma's research and development program is advancing the Company's technology and developing the next generation of IgG cleaving enzymes with lower immunogenicity, to potentially enabling repeat dosing in relapsing autoimmune diseases, chronic transplant rejection, oncology and gene therapy.

We have a significant patent protection for imlifidase and second generation enzymes beyond 2035.

## Quick Facts

- Innovative and fast growing biopharmaceutical company founded in 2007. President and CEO: Søren Tulstrup, Chairman Ulf Wiinblad.
- Listed on Nasdaq Nordic.
- Headquarter in Lund, Sweden, and operations in Europe and the United States.
- 90+ employees with an urge to develop innovative and potentially lifesaving and life altering therapies
